

Total Cancer Recoveries with Blood Electrification and Silver Colloid Ingestion

Theories Offered for Information and Educational Purposes Only

©Copyright 1996 by Robert C. Beck, D.Sc. (Issued July 22, 1996)

Opinions expressed in this article are based on the author's first hand experience and do not necessarily reflect those of this publication.

My archives still contain a tantalizing record from several decades ago describing an authenticated medical report of an older gentleman who was struck by lightning, survived, and subsequently grew a third set of teeth and a bushy head of youthful new dark hair. He threw away his glasses and cane and appeared much younger and was totally healthy for the first time in years. This fascinated scientists and years later almost encouraged some highly illegal human experiments in an abandoned aircraft hanger in Wendover, Utah where Tesla coil research with ball lightning was underway. This mystery remained sleeping until 1990 when an astounding discovery was reported at Albert Einstein College of Medicine in NYC by Drs. Kaali and Wyman. These data were apparently immediately suppressed. (See *Science News*, March 30, 1991, pg. 207, and *Longevity*: Dec. 1992, pg. 14.)

As a totally unexpected and unpredicted outcome of my ongoing self-funded research into "blood electrification" with micro currents since 1991, a growing number of users previously unknown to me independently reported remarkable "spontaneous remissions" of numerous diseases including cancer. This occurred after they had self-administered a simple do-it-yourself blood alteration process first described in US Patent #5,188,738 issued by Dr. Kaali in 1993. In follow-up trials this was independently confirmed with surprising repeatability. The Einstein disclosure describes removing blood from one arm, electrifying it, and returning it to the other in a process similar to dialysis. It also describes surgically implanted active electrode chambers containing miniature batteries sewn inside blood vessels. The author's perfected approach leaves all blood in the body, costs practically nothing and is safely accomplished in about two hours per daily exposure intended to catch most pathogens lurking in blood as it flows conveniently through the ~60cc volume of forearm's ulners. In less than a month

with no medications, invasive techniques or doctors, all pathogens, viruses, microbes, parasites and fungi just tend to disappear. Some of this can be easily seen with dark-field and phase-contrast microscopy. The process is fully described in my 1991 paper and *Explore!*, Volume 7, #1. Also simple instructions for self-made silver colloids of far better quality than you can usually buy are described in Volume 7, #2 of *Explore!*. You can turn any glass of tap or distilled water into a 3 ppm top-quality colloid in about two minutes anywhere with a shirt pocket sized battery-operated instrument.

To date many "spontaneous remissions" of dozens of "incurable" illnesses have been reported by users and researchers of this unexpected "blood purification" system when combined with ingestion of pennies per gallon easily self made silver colloid. Since none of dozens of friends using these simple miracles has had a cold, flu, pneumonia, or lost a single day's productivity in over three years, evidence strongly suggests restored immune systems or somehow a drastically altered human blood supply. It is as though the Creator had left a secret "back door" method for mankind to finally conquer incurable diseases plaguing us since the beginning of time. To stay out of big trouble, these revolutionary theories are now being offered under "First Amendment Freedom of Speech" rights and legally should not be construed as medical advice.

It has long been known that autopsies on deaths due to natural causes reveal some persons have had cancer several times during a lifetime, often resulting in "spontaneous remissions" completely without their knowledge and without ever visiting a doctor. It is theorized that an optimally functioning immune system somehow "handles" diseases of which the subject seldom becomes aware. Several promising broad spectrum immunological agents like interferon, interleukin, etc. are produced by healthy immune systems but would cost thousands of patients with already loaded or "shut down" defenses although many such neuropeptides could speed cures. Other respected researchers

describe "pleomorphic" forms of cancer pathogens which evolve through several stages, even mycotoxin involvement, all of which surrender to blood cleaning. In spite of dozens of theories offered, most diseases disappear with these simple, rapid, inexpensive *in vivo* do-it-yourself tools without drugs, herbs, homeopathics, doctors, discomfort or any medical intervention. Users have nothing to buy except replacement batteries. Complete recoveries cost under \$2 per patient per disease. For persons unwilling to assemble the simple device for about \$30.00, dozens of people are currently custom building them to order and several companies are providing excellent and reliable combination blood electrifiers and colloid generators. Most retail from \$125 to \$200. But this breakthrough is politically incorrect and may never be FDA approved because of billions invested in pharmaceuticals, treatment facilities, and clinical diagnostic equipment which must be amortized even if now obsolete. Outgrowths of this discovery give power over disease back to the individual; an economic disaster for health cartels! The only dangers lie in too rapid detoxification avoidable by increasing water intake for flushing wastes, plus no ingestion of any herbs (even garlic) during blood electrification because of vastly enhanced cell absorption due to electroporation. See J.C. Weaver; Harvard-MIT in *Journal of Cellular Biochemistry* 51:426-435: 1993.

One Eastern MD claims over two hundred documented cancer cures, many considered terminal, by using only blood electrification and no surgery, radiation, or chemotherapy. We're even seeing clean blood tests of now healthy patients with previously long-standing Lupus.

The most reasonable theory of why electrification is so unbelievably effective for so many conditions lies in the proven fact that when correctly applied directly into blood (not other body tissue like palms of hands, soles of feet, or into organs) it eliminates all microbes, pathogens, fungi, parasites, viruses, bacteria, mycotoxins and coexisting foreign lifeforms and alien invaders and their byproducts. This should never be confused with Royal Rife or Hulda Clark technology. Effective results require a minimum of 27 Volts low impedance output under load which must deliver up to several milliamperes measurable current into skin to produce the required 50 to 100 microamperes internally through blood after the inevitable series resistance losses through several layers of tissue plus vessel walls. Blood currents can be measured with an ac microamp meter

by IR drop directly into flowing blood with partially insulated hypodermic needles inserted ~8 inches apart in the same artery. Clark's "syncro zappers" at her standard 30 kHz (considered octaves too high to be effective) measures only ~2.6 V peak to peak under load at palms. Current is unmeasurable in the blood. This may only radionically mask readouts of parasite presence. Unfortunately the live bugs are still there. To function at all, electrification currently requires cotton covered saturated salt water stainless steel electrodes *never* over 3/32 inch wide and 1 inch long carefully positioned directly over and precisely in line with arterial pulse points preferably on opposite sides of the same wrist. Preferred instrument pulse repetition rate is ~4 Hz biphasic with steep rise time and 50% duty cycle. Frequency is *not* critical although higher frequencies and certainly higher harmonics of the essential square wave output can be degraded by "skin effect" when currents travel around the outside of the body instead of internally. There are no known harmful side effects to healthy cells or tissue. An unencumbered and restored immune system may make one almost immortal! This strongly suggests than even aging

bodies can easily and rapidly be made impervious to many hostile, toxic, infectious, antibiotic-resistant and even undiscovered invaders and eliminate ones long known to cause illness. It is fascinating to note that several pet owners report their cats now refuse to drink water if silver colloid is not added. Trips to veterinarians with previously recurring infections were cut dramatically.

One form of cancer (cervical) kills ~1/3 of all victims in the third world and has long been known to be caused by the papilloma virus. It is known that "blood cleansing" eliminates these toxic "fellow travelers" coexisting in our blood since mankind's beginnings and can totally restore one's immune system to optimum functioning and therefore automatically handle innumerable diseases previously considered "incurable" including Ebola and other new genetically engineered biological warfare "designer" germs to be unleashed someday per Peter Kawaja's views of Gulf War Syndrome diseases that are currently immune to all other known countermeasures *except* blood electrification.

Like all revolutionary ideas, this incredible breakthrough has barely survived initial ridicule and rejection because it is so startling, effective, inexpensive, simple

and foolproof. Next came unbelievability. Then it has experienced violent opposition from entrepreneurs selling health products it makes obsolete. Next, massive resistance came from the population's ~85% harboring unconscious "death wishes" of "defeat the healer" and who wish to protect their secondary gains. Predictably, some doctors realize this will erode their incomes and, therefore, must belittle it. A patient *cured* is a customer lost! So acceptance of blood electrification is just now emerging to enthusiastic acceptance from those with access to review of existing data which can ethically be made public only after peer reviewed journal publication describing several IRBs in progress. We now have our "hundredth monkey". Skeptics have only to use this technology to directly experience immensely better health. It works!

The writer is a researcher, not a practitioner. **I have nothing for sale.** Please never try to contact me by phone or letter or through third parties since it is a felony for me to answer well-meaning medical questions. I am a physicist, not a licensed medical practitioner and the devices are not presently FDA approved.♦
